

"InfoPrag Inc. delivers e-business integration solutions that help companies realize organizational efficiencies, offer better customer service, and improve return on investment."

## InfoPrag Inc. Corporate Profile

InfoPrag Inc. delivers e-business integration solutions that help companies realize organizational efficiencies, reduce costs, offer better customer service, and improve return on investment.

With a unique Delivery Model and a team of seasoned professionals, InfoPrag delivers the design, development and implementation of reliable, cost-effective, integrated e-business solutions. Leveraging the latest technologies--while protecting investments in existing technology--InfoPrag services large client organizations in a variety of diverse industries.

### Solutions

We provide architecture design and operational know-how to accomplish deep backend and legacy integrations.

InfoPrag integrates EIS systems, such as SAP R/3, with other enterprise applications, such as Supply Chain Management and Customer Relationship Management applications. Our Integration Solution Sets include Web Services, SAP Technology, and EAI & B2B Technologies.

### Web Services

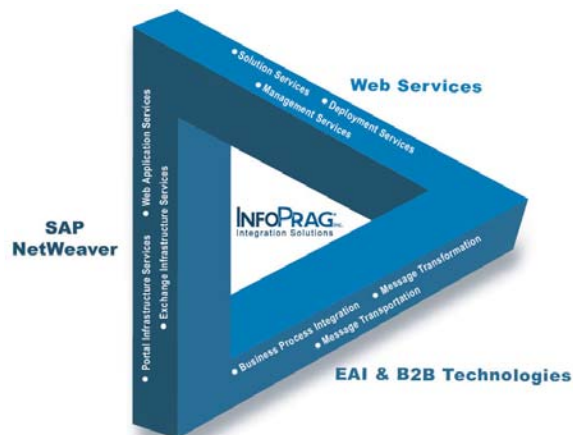

Web Services offer a new model of integration designed to overcome the constraints of traditional integration solutions. Through the use of this Internet technology and the application of best practices InfoPrag delivers low cost, innovative solutions for integrating various systems and applications.

### SAP Technology

InfoPrag has developed a track record of creating value for SAP customers as a premier SAP integration solutions provider. InfoPrag's knowledge and expertise in the SAP integration world continues to expand as SAP's technology evolves to meet customers' e-business needs.

### EAI & B2B Technologies

In order to link a variety of heterogeneous systems, many companies require powerful integration solutions for basic connectivity such as EDI and A2A integration as well as complex B2B solutions. InfoPrag uses webMethods®, Microsoft® BizTalk®, Mercator® products and IBM® MQSeries® technologies for these initiatives. In addition, our component products enhance these technologies and provide further value.

We help clients Reduce Risk by:

- Focusing on the critical components of an implementation;
- Reducing the development and implementation life cycle;
- Automatically generating critical design documentation and;
- Delivering projects on time and within budget

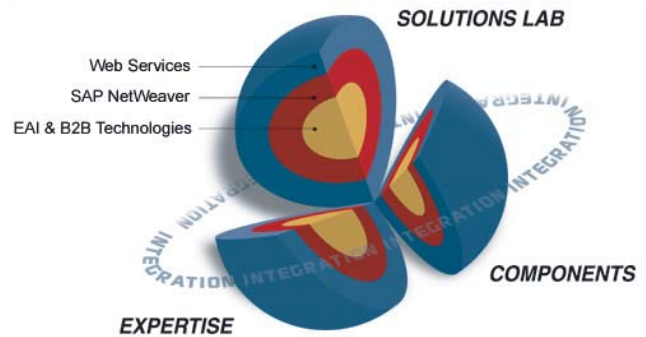

## Delivery Model

InfoPrag's success is rooted in the ability to deliver robust, scalable and flexible integration solutions that are aligned with changing business goals. This is accomplished by using a mix of the in-house **SolutionsLab**, a high degree of technical **Expertise**, and InfoPrag developed software **Components**.

## SolutionsLab

The **SolutionsLab** is a multi-vendor environment used to build, test and evaluate various integration solutions. Equipped with leading-edge middleware software, and many major ERP and packaged applications, it allows us to present proven solutions.

This technologically advanced computer lab provides a risk-free environment for proof-of-concept testing. It can be set up to replicate a specific environment to illustrate how solutions can be deployed to address particular needs.

## Expertise

InfoPrag specialists have developed a structured methodology that addresses the requirements for integration. The Delivery Framework Methodology provides an overall structure that is flexible enough to accommodate changes in requirements and scope, yet adds the discipline necessary to ensure project success.

The first dimension of the Framework describes the fundamental technology components for integration. The second outlines a phased implementation approach; and, the third maps the individual disciplines to the integration technology and the corresponding implementation phase.

## Components

A variety of utility components have been developed to enhance various technologies and simplify the effort as well as provide additional robustness to any integration initiative.

These components include:

- JComposer™ for Borland® JBuilder™
- X2X.swap™ for SAP R/3™
- PICO2™ for SAP R/3™
- MQSeries® Adapter Suite

## Results

Clients continue to demand InfoPrag services based upon our ability to reduce project risk by:

- Focusing on the critical components of an implementation;
- Reducing the development and implementation life cycle;
- Automatically generating critical design documentation and;
- Delivering projects on time and within budget.
