

"InfoPrag Inc. delivers e-business integration solutions that help companies realize organizational efficiencies, offer better customer service, and improve return on investment."

## SolutionsLab

Develop the CONCEPT, TEST for Results, PROVE the Idea

InfoPrag Inc. is able to provide companies with integrations solutions that help to realize e-business goals and improve return on investment. InfoPrag's SolutionsLab provides a multi-vendor environment for developing, testing, and demonstrating integration solutions, allowing companies to reduce the risks of implementing their e-business strategies.

Utilizing the SolutionsLab InfoPrag can help your organization with proof-of-concept testing to provide solutions that tackle critical issues, solve business problems and keep your competition from getting the upper hand.

## Proven Solutions for Business Problems

Equipped with today's **leading edge technology**, we can **replicate multiple environments** in the SolutionsLab to showcase how proposed solutions can be deployed to address a variety of needs.

InfoPrag solutions are built on real-life scenarios and are then prototyped and tested in a real-world environment.

**Evolving technologies are continually deployed** in the SolutionsLab so that we can fully explore their capabilities and how they can be used to develop innovative solutions.

InfoPrag uses its knowledge of the latest technologies and techniques, coupled with years of multi customer and project experience, to deliver proven solutions that move your business forward faster and more effectively.

## Find the Answers Risk Free

This safe, testing environment provides organizations with a solution to the problem of trying to find answers in a "real" environment.

- **Scaling an existing environment** and need to know what the affect will be on the current environment?
- How will introducing a **new vendor product** affect other systems?

Organizations can use the SolutionsLab to explore and resolve these and other complex issues in a risk-free setting. Stress testing of proposed applications can be simulated in real-world scenarios. Identify the answer to issues such as the application's ability to handle projected load requirements.

## On-Site and Virtual Demonstrations

Solution demonstrations are offered to showcase our solutions or to help you present your solutions to the right audience. Demonstrations can be done on-site at our Calgary office or virtually through the use of webcast technology.

Assembling your audience in one location need not be an issue. Using the appropriate encryption and firewall technology we will connect you and your audience directly to your own InfoPrag server to "sandbox" any solution you wish using the technology we provide.

## Develop the **CONCEPT**, **TEST** for Results, **PROVE** the Idea

- **Minimize the risk**
- **Aid in decision making**
- **Reduce implementation time**
- **Improve ROI**
